                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel plant transcription factor proteins (1) and nucleotide sequences (11) (AD061534-AD063778). The sequences can be used to produce transgenic plants, which overexpress (11), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises increased tolerance to abiotic stress, increased tolerance to cold, increased tolerance to cold, increased tolerance to cold, increased tolerance to cold, increased tolerance to deet increased tolerance to low introgen conditions, increased tolerance to increased tolerance to low introgen conditions, increased tolerance to low phosphate conditions, increased tolerance to sugars, increased tolerance to multiple fungal pathogens, increased tolerance to glyphosate, increased sensitivity to ABA, reduced sensitivity to ACC, altered sugar sensing, increased tolerance to sugars, altered carbon/nitrogen sensing, early flowering, latered carbon/nitrogen sensing, early flowering, altered flower structure, loss of flower determinacy, and tered and partichome development, altered trichome structure, altered vascular tissue structure, reduced apical dominance, altered development, altered cell proliferation, altered cell expansion, altered cell proliferation, altered cell expansion, altered cell expansion, altered seed cell proliferation, altered cell expansion, altered seed cell expansion, altered seed cell expansion, altered cell expansion, altered cell expansion, altered cell expansion altered seed c

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

US-09-640-211A-418

Sequence 418, Application US/09640211A

Patent No. 6833446

GENERAL INFORMATION:

APPLICANT: Wood, Marion

APPLICANT: Shenk, Marthew

APPLICANT: Glenn, Matthew

TITLE OF INVENTION: Compositions and Methods for the

TITLE OF INVENTION: Composition of Gene Transcription

FILE REPERENCE: 11000.1021C1U

CURRENT APPLICANTON NUMBER: US/09/640,211A

CURRENT FILING DATE: 2000-08-16

NUMBER OF SEQ ID NOS: 2368

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 418

LENGTH: 323

727 bp mRNA linear EST 07-MAR-2003 Solanum tuberosum cDNA clone cSTE1A17 5' sequence,
(Plant Journal, 1996). Small microtubers develop from axillary buds atteached to stem explants when placed on a high sucrose medium (10%). Visible morphological changes occur synchronously at day five in the axillary buds. The first library, GSTA (1-20) consists of axillary buds harvested on days 1-3. This targets those genes involved in induction of the microtubers. The following libraries, CSTA (1-40) and CSTA (1-60), capture genes involved in tuber initiation and outgrowth. This library is noted as P3 in Tankeley lab notebooks.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CTAAGCCTTTCTCCTCAGCTACAACAGCAAATTAGTTTCAATAACAATATTTCATCCTCA 696

//done="Vector: pBluescript SK(-); Site_1: EccRI; Site_2: XhoI; Tissue supplied by Christian Bachem and Richard
Visser (Department of Plant Breeding, Wageningen
University, The Netherlands). The cSTA libraries will
attempt to capture the induction and initiation/initial
growth of the tuber in an in vitro system as described
Bachem et al. (Plant Journal, 1996). Small microtubers
develop from axillary buds attached to stem explants when
placed on a high sucrose medium (10%). Visible
morphological changes occur synchronously at day five in
the axillary buds. The first library. CSTA (1-20) consists
of axillary buds harvested on days 1-3. This targets
those genes involved in induction of the microtubers. The
following libraries, CSTA (21-40) and CSTA (1-60),
capture genes involved in tuber initiation and outgrowth.
This library is noted as P3 in Tanksley lab notebooks."
